**PLEASE READ:**

ExamKiller's Industrious professionals have carefully designed and compiled this Practice Q&A for you. This Q&A aims at bringing the in-line ideas and concepts behind every question. It is better than other Practice Q&A because it's based in the Real Test Center. The answers to each question in this Q&A are not only exact and accurate but are verified as well. Some Q&A has explanations given in. They are written by the best people in industry enhancing your knowledge and learning experience. Instead of memorizing, our Q&A is made to make you understand things. You can read it a couple of times to increase your speed of exam attempt and comprehension.

All of our Q&As are updated regularly with changing exam objectives so keep an eye on the latest version of this Q&A to get the most updated and most accurate Q&A in line with the latest Exam objectives.

We welcome all your suggestions regarding this Q&A which can help us make this better for you. Please note down that the copy of this Q&A delivered by ExamKiller is only for your personal use and not for distribution. This Q&A is protected by US Copyright laws and any violation found may be dealt with legal action.

We thank you again for buying this Q&A product from us and we promise to continue serving you in future for all your Certification Training needs.

Which data collection job should be run for producing a storage subsystem performance report?

- A. subsystem scan
- B. subsystem probe
- C. subsystem discovery
- D. subsystem performance monitor

Select the best answer.

Answer: D

MarkTime Remaining: 59:36 

How many zone set(s) can be active at the same time?

- A. 1
- B. 3
- C. 10
- D. unlimited

Select the best answer.

Which definition best describes a master IBM Tivoli Storage Productivity Center (Tivoli Storage Productivity Center) server?

- A. A server that manages the replication sessions between Tivoli Storage Productivity Center servers ensures that these sessions are in sync, and provides a progress report.
- B. A server not only monitors and reports on storage resources like a standard server, but also communicates with other master servers to gather storage information collected by these servers.
- C. A server manages and monitors the status of all Storage Resource agents defined to subordinate Tivoli Storage Productivity Center servers by running periodic Tivoli Storage Productivity Center server probes.
- D. A server not only performs normal monitoring and reporting of storage resources like a standard server, but also gathers the storage information (by Tivoli Storage Productivity Center server probes) that has been collected by subordinate servers.

How is a constraint created that defines the acceptable and unacceptable file types, file sizes, and file owners for a computer or a set of computers in an environment?

- A. Select policy constraint, choose which restrictions to set, choose which users on which computers to forbid access to, set alert, and run scan.
- B. Using Data Manager, select constraints, choose which file systems, groups or computers against which to apply the constraint, apply the constraint, choose action in the type field, and set alert.
- C. Using Policy Manager, create constraint, select files, groups, systems, computers, network and storage resources which you want to apply the constraint against, select the file types to forbid, define alerts, and run scan job.
- D. Using Data Manager, select Policy Management, create constraint, select file systems, file system groups, computers, and computer groups against which to apply the constraint, select the storage resources against which you want to apply the constraint, select the file types that you want to allow or forbid, and define alerts.

Which three tasks must be performed before gathering information about NetWare volumes? (Choose three.)

- A. Create profiles to define which NetWare servers to scan.
- B. Assign agents to each of the volumes discovered on the licensed NetWare servers.
- C. Create quotes to control how many NetWare volumes should be discovered and monitored.
- D. Configure Device Manager to discover all the NetWare servers in the NDS trees and then run a ping job.
- E. Define a scan and include the NetWare volumes and file systems to gather detailed storage information.
- F. Configure Data Manager to discover all the NetWare servers in the NDS trees and then run a discovery job.

Select 3 answers.

**Answer: BEF**
