PLEASE READ:

ExamKiller's Industrious professionals have carefully designed and compiled this Practice Q&A for you. This Q&A aims at bringing the in-line ideas and concepts behind every question. It is better than other Practice Q&A because it's based in the Real Test Center. The answers to each question in this Q&A are not only exact and accurate but are verified as well. Some Q&A has explanations given in. They are written by the best people in industry enhancing your knowledge and learning experience. Instead of memorizing, our Q&A is made to make you understand things. You can read it a couple of times to increase your speed of exam attempt and comprehension.

All of our Q&As are updated regularly with changing exam objectives so keep an eye on the latest version of this Q&A to get the most updated and most accurate Q&A in line with the latest Exam objectives.

We welcome all your suggestions regarding this Q&A which can help us make this better for you. Please note down that the copy of this Q&A delivered by ExamKiller is only for your personal use and not for distribution. This Q&A is protected by US Copyright laws and any violation found may be dealt with legal action.

We thank you again for buying this Q&A product from us and we promise to continue serving you in future for all your Certification Training needs.

Promising your success,

ExamKiller

A current IBM Tivoli security customer is highly satisfied with their current IBM Tivoli Identity Manager (Tivoli Identity Manager) and IBM Tivoli Access Manager (Tivoli Access Manager) implementations. The customer has benefited greatly from their user management and provisioning, authentication, authorization and Web single sign-on processes now in place.

The customer sees the value of Web services and wants to leverage their business partnerships to greatly expand their online services, for a relatively small investment. They are expecting that their existing Tivoli Identity Manager and Tivoli Access Manager investments can simply be stretched to include these business-to-business (B2B) flows.

IBM Tivoli Federated Identity Manager should be added to this scenario to address which security requirement?

- A. the blocking of threats that might otherwise cross enterprise boundaries
- B. the integration with firewalls that control security between any two businesses involved in these B2B flows
- C. the handling of potential millions of users, which neither Tivoli Identity Manager nor Tivoli Access Manager is built to address
- D. the handling of multiple types of standards-based protocols and user tokens that need to be passed between participating businesses

Select the best answer.

Answer: D

After a number of interviews with various customer personnel, the term "user productivity – logon and transaction experience" came up as a business process. Other than the word "logon", there is not much in the way of additional description that gives insight into how that process relates to security.

What is a good list of security (and related) elements that relate most closely to the process as identified above?

- A. firewall, filtering router, and intrusion detection
- B. SSL acceleration, content filtering, and pop-up blockers
- C. single sign-on, personalization, scalability, and availability
- D. identification, public-key infrastructure, and multi-factor authentication

Select the best answer.

What are two benefits of IBM Tivoli Directory Integrator? (Choose two.)

- A. It provides a simple interface for improving Active Directory content and making this content available for other uses.
- B. It performs real time synchronization between identity data sources to establish an authoritative identity data infrastructure.
- C. It provides a framework for rapid integration development and relieves what the customer typically has to hand-code from scratch.
- D. It makes building data flow fast and easy, which eliminates the need for traditional design and implementation decisions inherent in other productions.
- E. It provides a framework that enables a company to integrate multiple security software into existing structures, as opposed to forcing the company to develop new IT infrastructure.

While reviewing the current security policies for a company, it is discovered that a standard exists, which dictates that information access must conform to HIPAA. Currently the customer has no automated method to verify adherence to this policy.

Which IBM Tivoli security solution is recommended to provide the customer with the ability to report on exceptions to this policy?

- A. IBM Tivoli Identity Manager
- B. IBM Tivoli Security Compliance Manager
- C. IBM Tivoli Access Manager for e-business
- D. IBM Tivoli Access Manager for Enterprise Single Sign-On

Select the best answer.

Answer: B

Which statement is true about new initiative deployment?

- A. New initiatives typically involve advanced authentication, and advanced authentication must be properly provisioned.
- B. New initiatives are typically coded in Java, .NET or C++, and each of these requires a tool that measures security compliance.
- C. All new initiatives require a service-oriented architecture (SOA), and SOA standards demand that a security component be present.
- D. Newly deployed applications can be coded, tested and updated more quickly if an authentication and authorization solution is used that avoids coding security into the application.
