The Business Continuity Review describes the system availability characteristics of the solution design. In a typical high availability (HA) configuration, a load balancer is configured in front of several peer masters for the directory server.

Which statement is true regarding load balancing in an IBM Tivoli Identity Manager (Tivoli Identity Manager) HA solution design?

- A. If a primary master goes down, all traffic to that master is held until the master is available.
- B. Load balancing of write traffic is unwise, because it leads to a possibility of an update conflict.
- C. If the primary system goes down, the remaining systems do not need to be able to bear the work load.
- D. The Tivoli Identity Manager dataservices component will assist the load balancer in the redirecting of requests to one of the other replicated Tivoli Identity Manager servers.

Which steps are needed to create the password policy design?

- A. define password policy scope, select password settings, document password policy design
- B. define password policy requirements, analyze password settings, document password policy design
- C. gather current password settings, analyze password policy, define password scope, document password policy design
- D. gather password policy requirements, define password policy scope, define password settings, document password policy design

Select the best answer.

Answer: D

Mark

Which option is relevant to gathering requirements and creating an IBM Tivoli Identity Manager (Tivoli Identity Manager) system architecture document?

- A. formulate list of questions, identify interviewees, identify timelines for project phases, and delegate responsibility
- B. formulate list of questions, identify interviewees, identify network topology, and ensure business continuity planning
- C. formulate list of questions, identify interviewees, discuss organization chart structure, and discuss Tivoli Identity Manager ACI and group security model
- D. discuss firewall rules, discuss certificate installations for HTTPS communication, and discuss Tivoli Identity Manager Web application security and hijack-prevention features

Select the best answer.

Answer: B

Mark

Which sequence of actions best describes a secure practice for sensitive data in an IBM Tivoli Identity Manager (Tivoli Identity Manager) database?

- A. Schedule periodic database backups regularly in order to prevent losing sensitive data.
- B. Enable security on the WebSphere Application Server and disallow running the WebSphere Application Server using a non-root account.
- C. Restrict network traffic to those ports or systems needed by the deployment only. If you write your own application and use a Tivoli Identity Manager API to retrieve sensitive data, encrypt the data before sending it over the network.
- D. Restrict operating system access to database files. Limit the privileges of the operating system accounts (administrative, root-privileged, or DBA) to the least privileges needed, change the default passwords, and enforce periodic password changes.

Select the best answer.

Answer: D

Mark

Given the desired services list and organization structure design, which two options are essential to create a service design? (Choose two.)

- A. Define reporting data.
- B. Validate human resource data.
- C. Define organization requirements.
- D. Gather platform business processes.
- E. Gather IBM Tivoli Identity Manager access requirements.
