Answer:D

While developing an IP call recording solution for a call center you consider the Time Slot impact on the system. Call Center R3.1 introduced the No-talk FAC (Facility Access Code) for Service Observing feature which can reduce the Time Slot usage of a call recording solution.

What are two potential limitations of this capability? (Choose two)

- A. Not available for H.248 Media Gateways (G700/G350/G250)
- B. Limits the amount of recording time
- C. Recording device does not have a Talk Path to insert a warning tone
- D. Only available on S8720 Media Servers

Answer:ABD

Your customer has Avaya Communication Manager 2.0, Call Center 2.0 with Call Management System R12. They have agents that remain in After Call Work (ACW) mode for extended periods of time. Therefore, the reported results do not accurately reflect the activity that is occurring.

Which solution provides accurate reporting?

- A. reboot the Avaya Call Management System (CMS)
- B. access the Avaya Communication Manager (ACM), then busy out and release the agents
- C. upgrade the Avaya Communication Manager (ACM) and Avaya Call Center to 4.0 for Forced Agent Logout from ACW
- D. upgrade to Avaya Call Center 4.0 and Avaya Call Management System (CMS) Release 14 for Forced Agent Logout from ACW

Select the best response.
