## Session: 91 Questions

Question 1 of 91

Untitled - Notep...  
Mac OS X Server Essentials 10.6 Exam (300-510)

Time remaining: 00:56:04

You are setting up a Mac OS X Server v10.6 computer to host NetBoot images. How do you let users on client computers booted from the NetBoot service retain their personal system settings, such as preferred Dock location?

- A. In Workgroup Manager, configure the user accounts to use a network home folder.
- B. In Workgroup Manager, set the managed preferences for the user accounts to "Never managed".
- C. In Server Admin, configure the NetBoot service to store its shadow files on an AFP or NFS server.
- D. In Server Admin, enable the Client Data option for the volume on the server that is hosting the NetBoot images.

**Answer: A**

The option to allow an administrator to masquerade as any user is enabled for the AFP service on a Mac OS X Server v10.6 computer. How does the administrator masquerade as the user Fred when connecting to the server?

- A. The administrator authenticates using Fred's user name and the admin user's password.
- B. The administrator authenticates using the admin user name and password, then chooses Fred's volume in the AFP volume selection dialog.
- C. The administrator opens `/System/Library/CoreServices/AFP Connect`, enters the admin user name and password, followed by Fred's user name and password.
- D. The administrator authenticates using the admin user name and password, then chooses Fred's name from the Action pop-up menu in the AFP volume selection dialog.
