Session: 64 Questions

1. How does a sparse bundle disk image differ from a sparse disk image?

- A: The image data in a sparse bundle disk image cannot be encrypted, while the image data in a sparse disk image can be encrypted.
- B: The image data in a sparse bundle disk image is stored in multiple files, while the image data in a sparse disk image is stored in a single file.
- C: A sparse bundle disk image must be formatted as an HFS volume, while a sparse disk image may use any format available for a Mac OS X volume.
- D: As more files are added to a sparse bundle disk image, its file size increases, unlike a sparse disk image, whose file size remains static as files are added.

Correct Answers: B

2. Review the screenshot, then answer the question below.
