Session: 74 Questions

1.You have an Open Directory master with many replicas. The master has had a hardware failure. How should you promote one of the replicas to master and have all the other replicas look to the new master?

A: Using Server Admin, change one of the Open Directory replicas to a master, and then change all of the remaining Open Directory replicas to standalone servers, and back to replicas.

B: Using dsconfigldap, change one of the Open Directory replicas to a master, and then use Server Admin to change all of the remaining Open Directory replicas to standalone servers, and back to replicas.

C: Using Server Admin, change one of the Open Directory replicas to a master, and then change the address of the Open Directory master on all of the remaining replicas, without changing the role of the replicas.

D: Using dscl, change one of the Open Directory replicas to a master, and then use serveradmin to change the address of the Open Directory master on all of the replicas, without changing the role of the replicas.

Correct Answers: A

2.You are configuring a Mac OS X Server v10.5 computer to search multiple directory domains. How can you specify the order in which the server searches the directories when authenticating users?

A: Define a custom search path in the Authentication pane of Directory Utility.

B: Run slapconfig -setauthmechanisms and specify the directory domain search order.

C: In the Mappings pane of Directory Utility, modify the mapping for the AuthenticationAuthority attribute.

D: In the Advanced pane of Workgroup Manager, configure the computer account and enter the authentication search path.

Correct Answers: A

3.In Mac OS X Server v10.5, GeneratedUIDs provide for user identification in which TWO contexts? Choose the two best answers.

A:file ACLs

B:file ownership

C:password policies

D:group membership

E:Kerberos TGT requests

F:CDSA security verification

Correct Answers: A, D

4.A search base for an LDAP request describes _____.

A: the client application making the search request

B: the location in the LDAP hierarchy where the search will begin

C: the network path to the LDAP server that the request will search

D: the directory services data types that correspond to the LDAP entry being searched

Correct Answers: B

5. In a default configuration of a Mac OS X v10.5 computer, which folder contains Open Directory logs?

- A: ~/Library/Logs/
- B: /var/log/dslocal/
- C: /System/Library/Logs/
- D: /Library/Logs/DirectoryService/

Correct Answers: D

6. What type of entry in an LDAP schema defines the record type(s) that the LDAP directory supports?

- A: OID base
- B: object class
- C: syntax definition
- D: attribute definition

Correct Answers: B

7. You want to add a user to an Open Directory master. Which command-line tool lets you do so without requiring that you stop the DirectoryService process to avoid data corruption?

- A: dscl
- B: slapadd
- C: slapconfig
- D: slappasswd
- E: dsconfigldap

Correct Answers: A

8. You want a Mac OS X v10.5 computer to mount a network volume dynamically over AFP when users log in to the computer. Which TWO attributes must be defined in the mount record? Choose the two best answers.

- A: Export
- B: MountDir
- C: VFSSOpts
- D: VFSType
- E: VFSMount
- F: HomeDirectory

Correct Answers: C, D

9. In Mac OS X v10.5, how do you enable or disable debug logging for the DirectoryService process?

- A: Enter the command `killall -USR1 DirectoryService` in Terminal.
- B: In Server Admin, select Detailed Logging in the Open Directory service pane.
